

Wind Low is a hand tufted rug for exterior and interior environments.

The texture is created with a one- or two-colour round braid that is tufted to a synthetic backing to create 1 centimeter high loops.

The backing can be seen through the loops and is always black.

Only one colour can be chosen.

The technique used to produce Wind Low creates lines or areas in which the colour of the rug may appear lightly different.

These effects, which are due to the loops density, are in line with the hand tufting technique and are the mark of craftsmanship, which makes each rug unique,

We advise against the use of Wind Low in very humid or rainy environments.
