

Cabanne is an architectural structure that can be used singularly or in different combinations.

Structure: galvanized steel, matt varnished in avorio, grafite, mora, ruggine, sottobosco, oliva or foresta colour.

- with HEA base for the installation on not weight bearing surfaces
- with plates for the installation on weight bearing surfaces.

Both versions are available in two heights; the heights must be used when a finishing flooring is to be laid. A finishing flooring is always needed if Cabanne is used on not weight bearing surfaces.

Roof:

- aluminium, matt varnished in avorio, grafite, mora, ruggine, sottobosco, oliva or foresta colour
- aluminum frame with Sassafras wood lattices
- aluminum frame with Thuia fabric
- polyester net complete with a false ceiling in Thuia fabric

False ceiling: to be used with aluminium or wood lattices roofs, composed of two aluminium frames covered with Thuia fabric.

Side panels: fixed or moving

- aluminum frame with Sassafras wood lattices
- aluminum frame with Thuia fabric
- aluminum frame with transparent tempered extralight glass.

Notes:

Instead of side panels, Shade fabric curtains, sand color, can be used. The curtains are mounted onto the structure with a multithread AISI 316 stainless steel cable, tensioned with AISI 316 stainless steel screws.

The colour of the structure always matches the colour of the Thuia fabric.
