

Chaise longue.

The Hiro series also includes a lounge chair and is available in the Aqua collection version too.

The natural materials featured in the Eres collection can be used outdoors, but not be directly exposed to the elements, and require some extra attention and care than traditional outdoor furniture. These products need to be used under a stable cover and to be protected overnight. It is also recommended that they are sheltered indoors for seasonal protection. Some of the materials will mature and will change appearance and colour over time. And this will naturally happen.

Structure: natural sassafras wood; the structure is divided into two parts, one slightly distancing the seat from the ground and the other acting as back cushion support.

Seat and back cushion: with removable cover, in polyester fiber with insert in stress resistant expanded polyurethane, fixed covering in waterproofed polyester.

Seat and back cushion upholstery:

- Lino Délavé
- Canapa Délavé

Notes:

The backrest can assume two different inclinations according to how the rear support is positioned.

Seat and back cushion is also available upon request in natural latex, paineira vegetable fiber and woolen felt, insert with steel elastic springs, fixed covering in 100% cotton fabric.

The entirely natural padding of both the seat and back cushions guarantees the same comfort of a traditional synthetic padding.

The paineira vegetable fiber is water repellent, non-allergenic and completely biodegradable.

Sassafras wood is treated with water-based products that limit the absorption of liquids and greasy substances.

The change in colour and the possible appearance of superficial splits are the typical effect of the natural evolution of the wood over time.

The product can be used also in interior environments.

We advise to use a Winter Set protection cover.
