

Movable backdrop made of Rope cord.

Materials:

Mandala backdrops are made of Rope cord, a Paola Lenti signature material, which is used to weave by hand many outdoor seating pieces and to produce the rugs in the High Tech collection.

The backdrop is composed of rigid aluminium rings assembled in such a way as to create a geometric design.

The covering of the rings and the bands connecting them to one another are made of Rope cord.

For the fixing to the ceiling, a specific structure is available made of white matt-varnished steel and provided with steel cables and extension regulators for the levelling of the composition.

The standard structure is composed of linear elements that are joined to one another.

Mandala is designed and produced in custom dimensions, always meeting the specific requirements of the client.

Characteristics:

Rope cord is a high performing technical material; it does not absorb odours, is easy to clean and is produced in hundreds solid and two-colour shades.

Furthermore, Rope complies with the international flammability standards TB117-2013 and BS5852.

Mandala backdrops can be produced either in one single colour or in two colours: one for the rings and one for the connecting bands.

Dimensions:

The standard height of a Mandala net is 300 cm.

The width of the net can be made to measure as close as possible to the dimension required by the customer, compatibly with what is achieved by hooking the aluminium rings together.

Applications:

Composition of vertical movable backdrops, both indoors and outdoors, in residential as well as public and commercial spaces.

Awards:

Mandala has been awarded with the NYCxDESIGN AWARDS 2019.
