

This mat for exterior and interior environments is created by loom weaving the high-tech yarn used in the production of the Thua fabric. The two sides corresponding to the width of the rug are finished with a border in the same yarn but in contrasting colour. The sides corresponding to the length of the rug are instead finished with a fringe, resulting from the weaving process, and the application of a décor sewn with Punto Zigzag that consists of three flat braids in Rope yarn, two with a more regular pattern, one more sinuous. One colour can be chosen for the mat, up to a maximum of two colours can be chosen for the décor.

The Asira rug is woven on a loom; hence, its width is fixed at 200 cm.

The textile structure of this mat is free: an intense stepping may cause a variation of the mat dimensions. Materials and production techniques advise against the use of Asira in high traffic areas.
